This 16,230 square foot slab on grade parking garage was coated with the Strongcote Traffic Deck Membrane because of its breathability. The owners wanted to enhance the aesthetics of the underground garage so Resicolor#4 was used to provide a more uniform appearance to the anti-slip surface. The coating is Zero VOC and odorless, which is a perfect choice for a public venue in downtown Raleigh with a high volume of people coming in and out of the complex daily.
