

John W. Bricker Federal Building Garage

Installation
2005

The coating of this 160,000 square foot parking garage had to be applied on weekends. The surface preparation began at 6pm Friday night and the garage had to reopen at 6am Monday morning. The contractor chose Strongcote SC-113 vehicular grade coating due to its quick curing time and ease of installation to complete 40,000 square feet per weekend.
